## Electronically

Commutated Motors

As a professional electric motors manufacturer who cares about environment and energy saving, one of our most important goals is to help our partners to reduce total life operation costs, increase profitability and make production more environmentally friendly.

EC (Electronically Commutated) motors is the special designed PMS (permanent magnet synchronous) motors which constructed on the base of the IEC norm, it is now available in four frame sizes: IEC-71\#, IEC-90\#, IEC-100\#, IEC-132\#, the maximum output is 22 kW and the maximum torque is 70Nm.

To be qualified for the next generation which requires for higher energy saving products, EC motors has the following advantages:

Extremely high efficiency, average value is over IE4 norms.
Very high efficiency in wide speed up to 3600 rpm and power range.
Compact and light design with high uniformity in appearance design with other products.
Mounting dimensions according to the IEC norm, easy to replace from standard AC motors to EC motors.
Various and flexible mounting types suitable for different applications.

## E-Max motors is the first generation of EC motors which has led to develop the next generation of technology in motor efficiency and performance.

## E-Max motors contains two series:

## E-max commercial

IEC frame size $71 \#$ to $90 \#$ permanent magnet synchronous motors with integrated drive.

## E-max industrial

IEC frame size 71\# to 132\# permanent magnet synchronous motors

## VFD consideration

PMS motors must be drove by VSD, the motor cannot connect to the normal AC power directly. The VSD can be the commercial drive with vector control or PM motor control mode. VSD need to be set up the correct motor parameter (see below table). The detailed parameters can be find in the model data sheet.

## Power choose consideration

The power and torque in above model list is the rated power or torque when the motor has not any cooling method (IC410). If the motor cooled by the wheel or the load the motor power can be higher. The detail running range please see detail model data sheet. Below chart is a sample to decide the power at different cooling
condition.

T71ECI motor with integrated drive (B3)

T90EC motor with fan cooling (B3, IC411)

T100EC motor with fan cooling (B3, IC411)

T132EC motor without fan cooling (B3)
